International Conference on Mining Software Repositories (MSR'22) | May 20, 2022

Background

Detecting and assessing software vulnerabilities in machine learning is still a challenge mainly due do the scarcity and poor quality of curated data.

The chase for a gold standard dataset

The detection of software vulnerabilities through commit messages is still challending due to the **lack of structured** and **clear messages**.

Static Analysis (Source code)	D2A [ICSE-SEIP'21]
Fuzzers (Source code)	FuzzBench [ESEC/FSE'21]
Regex / Keywords (Commit Messages)	SecBench [SecSE'17] Devign [NeurIPS'19]

vermen Jources	Big-Vul [MSR'20] CVEFixes [PROMISE'21]
ID 1 1 N	SySeVR [TDSC'21]

Manually	Pontas et. al [MSR'19]

Have you ever wondered if security commit messages are informative?

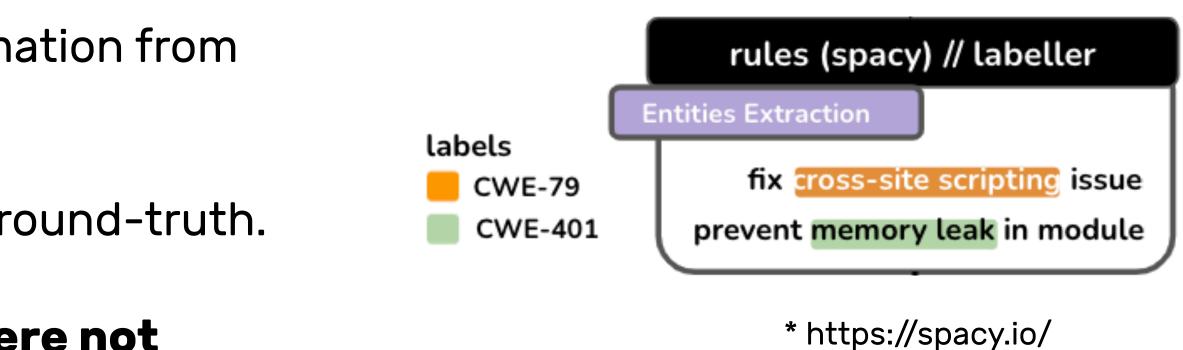

Security experts/developers mainly provide cryptic and poor commit messages."

We built a rule-based tool to extract information from security commit messages.

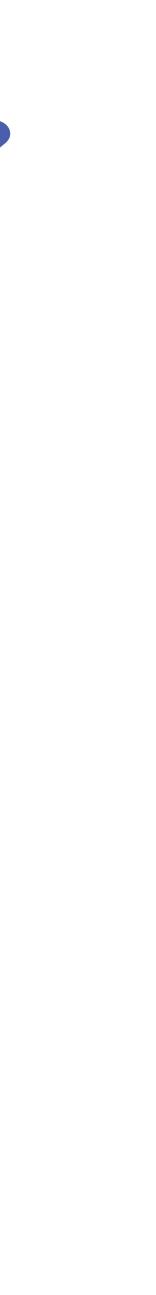

These rules were improved based on the ground-truth.

From 2297 messages analysed, 22.81% were not classified by our rules.

Data was collected from GitHub commits found in the references of CVE reports.

Cryptic/poorly documented

1 parent 7d5ba82 commit cc75fdc3e610985a5f391789d33fb70c8c9114d6

Some commit messages used to patch known vulnerabilities are either poorly documented or do not seem to be security-related.

Q Hooray!! We need best practices commit messages.

Attps://tqrg.github.io/secom/

Vectors of the security of th

How to write a good security commit message? Any sources/guidelines available? Well, for commits, yes, but for security commits, no!

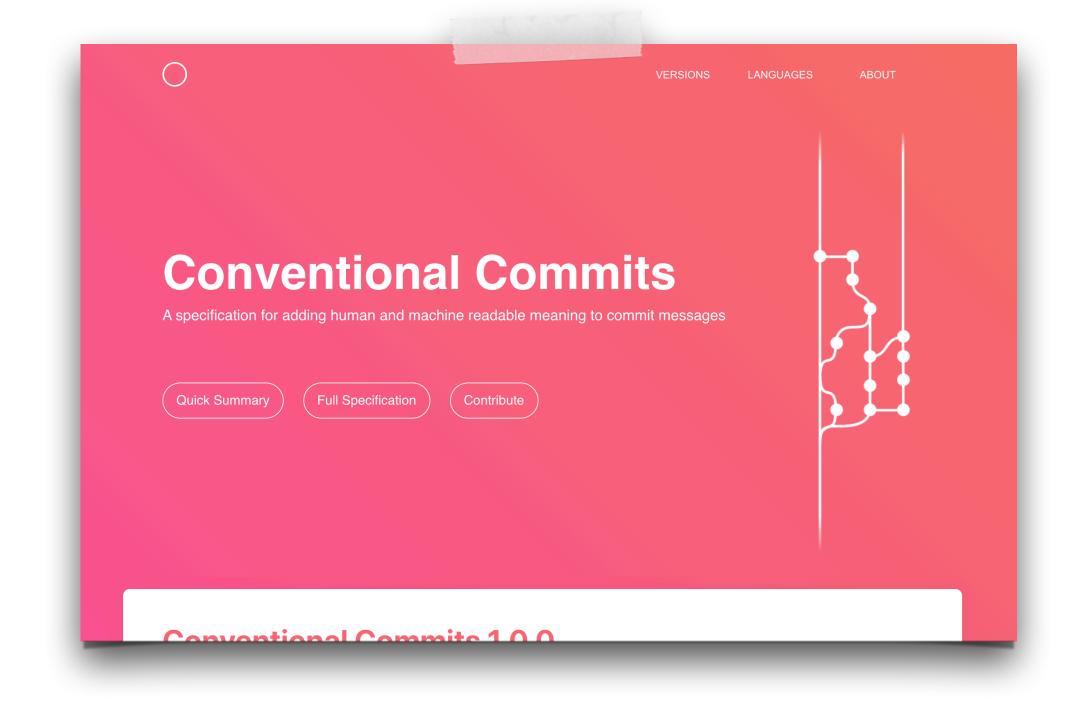

Conventional Commits 1.0.0

4. types other than fix: and feat: are allowed, for example @commitlint/config-conventional (based on the the Angular convention) recommends build: , chore: , ci: , docs: , style: , refactor: , perf: , test: , and others.

The Conventional Commits source suggests adding a type to the subject/header like fix: or feat:

e.g., fix: cross-site vulnerability

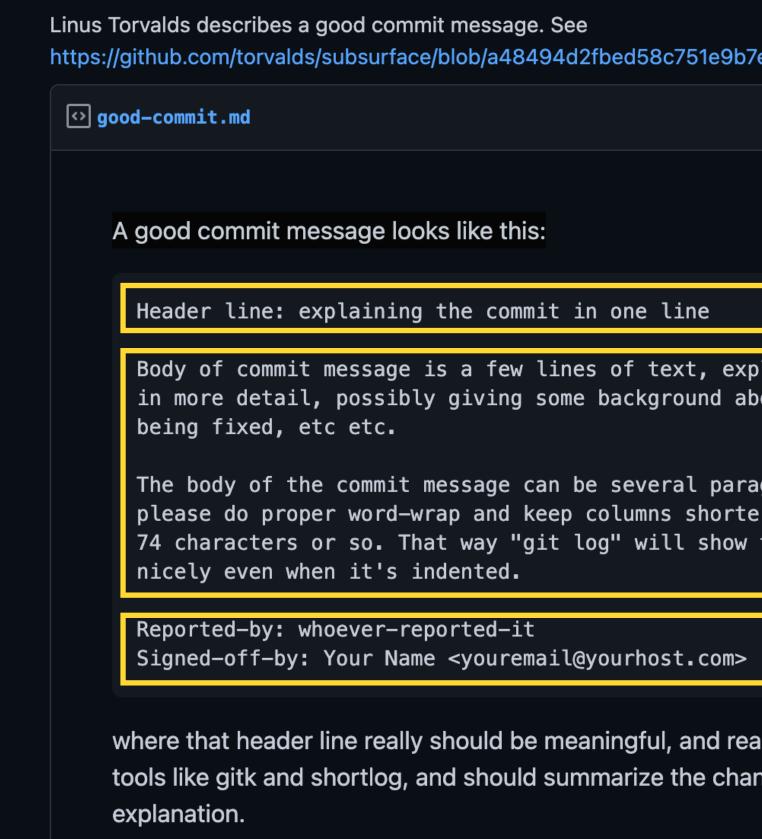

https://www.conventionalcommits.org/en/v1.0.0/

How to write a good security commit message? Any sources/guidelines available? Well, for commits, yes, but for security commits, no!

"How to Write a Git Commit Message" by Chris Beams

Summarize	changes	in	around	50	characters	or	less
-----------	---------	----	--------	----	------------	----	------

More detailed explanatory text, if necessary. Wrap it to about 72 characters or so. In some contexts, the first line is treated as the subject of the commit and the rest of the text as the body. The blank line separating the summary from the body is critical (unless you omit the body entirely); various tools like `log`, `shortlog` and `rebase` can get confused if you run the two together.

Explain the problem that this commit is solving. Focus on why you are making this change as opposed to how (the code explains that). Are there side effects or other unintuitive consequences of this change? Here's the place to explain them.

Further paragraphs come after blank lines.

- Bullet points are okay, too
- Typically a hyphen or asterisk is used for the bullet, preceded by a single space, with blank lines in between, but conventions vary here

If you use an issue tracker, put references to them at the bottom, like this:

```
Resolves: #123
See also: #456, #789
```

https://chris.beams.io/posts/git-commit/

2

Keep commits atomic (1 task -> 1 fix)

Subject

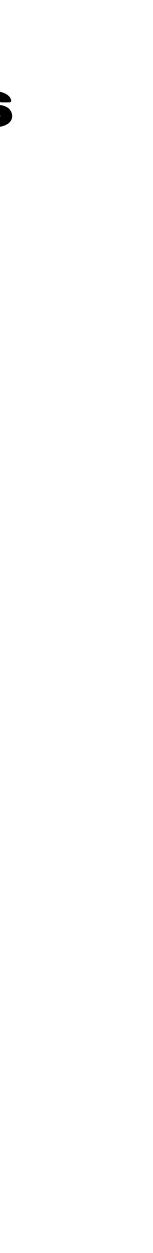

- 50 chars (max)
- Capitalized
- No period in the end
- Imperative form

Body

- -72 chars
- What, why and how

Bug-trackers // PRs & Issues mentions

Atomic changes: Commit each patch as a separate change. – *ref. Chris* Beams

https://tqrg.github.io/secom/

```
1 vuln-fix: subject/header containing summary of changes in ~50 characters (Vuln-ID,)
2
3 Detailed explanation of the subject/header in ~75 words.
    (what) Explain the security issue(s) that this commit is patching.
4
    (why) Focus on why this patch is important and its impact.
5
    (how) Describe how the issue is patched.
6

26 Resolves: #123

Subject should contain a brief summary of the patch. – ref. Chris Beams an Linus Torvalds.

¹ We observed the inclusion of the **Vuln-ID** on the subject/header in some security commits.

 \mathbb{P} This pattern makes it easier to locate the patch when using shortlog/git l -pretty=oneline.

Convention > Example

before

URL sanitize: reject URLs containing bad data

Protocols (IMAP, POP3 and SMTP) that use the path part of a URL in a decoded manner now use the new Curl_urldecode() function to reject URLs with embedded control codes (anything that is or decodes to a byte value less than 32).

URLs containing such codes could easily otherwise be used to do harm and allow users to do unintended actions with otherwise innocent tools and applications. Like for example using a URL like pop3://pop3.example.com/1%0d%0aDELE%201 when the app wants a URL to get a mail and instead this would delete one.

This flaw is considered a security vulnerability: CVE-2012-0036

Security advisory at: http://curl.haxx.se/docs/adv_20120124.html

Reported by: Dan Fandrich

[curl/curl/75ca568]

Attps://tqrg.github.io/secom/

vuln-fix: Sanitize URLs to reject malicious data (CVE-2012-0036)

Protocols (IMAP, POP3 and SMTP) that use the path part of a URL in a decoded manner now use the new Curl_urldecode() function to reject URLs with embedded control codes (anything that is or decodes to a byte value less than 32).

URLs containing such codes could easily otherwise be used to do harm and allow users to do unintended actions with otherwise innocent tools and applications. Like for example using a URL like pop3://pop3.example.com/1%0d%0aDELE%201 when the app wants a URL to get a mail

and instead this would delete one.

Weakness: CWE-89

Severity: High

Detection: Manual

Report: https://curl.se/docs/CVE-2012-0036.html

Reported-by: Dan Fandrich

Signed-off-by: Daniel Stenberg (daniel@haxx.se)

Resolves: #17940

Feedback (OpenSSF)

We presented SECOM in two different OpenSSF working groups: "Best practices" and "Vulnerability disclosure".

Open Source Vulnerability (OSV) Database Team

Feedback was very positive! – One member of the OSV team provided a full review of the convention.

Members of OpenSSF showed interest to apply and advocate for the convention inside their companies.

https://tqrg.github.io/secom/

Some concerns regarding adoption were raised. OpenSSF is keen to help us here! Scoreboards; Educational programs/tutorials; and, conference talks.

But, in general, the OSS security community suggested that they would like to see SECOM evolve into a standard practice.

WHAT'S UP NEXT?

Compliance checkers.

Transform SECOM into a standard practice in the security community with the help of OpenSSF.

Carto-completion.

Recommendations.

Don't forget to visit our website!

https://tqrg.github.io/secom/

Any idea on how to improve the convention? Let us know. 🛃
